Appendix A: Mitigation Monitoring and Reporting Program	
---	--

SECTION 1.0 - INTRODUCTION

On June 15, 2026, the City of Beaumont (City) distributed the Draft Initial Study/Mitigated Negative Declaration (IS/MND) for the Beaumont Corporate Yard Project to public agencies and the general public. In accordance with the California Environmental Quality Act (CEQA) Section 21091 and State CEQA Guidelines Section 15073, a 30-day public review period for the Draft IS/MND was provided from June 15, 2026 to July 14, 2026. **The City Council will review the IS/MND for adoption on August 14, 2026, at its regularly scheduled meeting located at City's office located at 550 East Sixth Street, Beaumont California 92223.**

The NOI and the IS/MND were available for review at the following locations:

- City's office located at 550 East Sixth Street, Beaumont, California 92223
- <https://www.beaumontca.gov/1125/Planning-Projects>

SECTION 2.0 - PROJECT DESCRIPTION

A. PROJECT PURPOSE

This Initial Study (IS) analyzes the proposed development of a city yard that would be utilized by the City of Beaumont (City) to manage various City services, including transit, vehicle maintenance, facilities, parks and recreation, engineering, street maintenance, and wastewater administration. The proposed city yard will also accommodate future staffing levels (Proposed Project). The IS has been prepared in accordance with the California Environmental Quality Act (CEQA; Public Resources Code [PRC] §21000 et seq.) and the State CEQA Guidelines (Title 14, California Code of Regulations [CCR], §15000 et seq.) and has determined that preparation of a Mitigated Negative Declaration would be appropriate under CEQA.

B. PROJECT LOCATION AND SITE CHARACTERISTICS

1. Project Location, Setting, and Surrounding Uses

The City is located within the western area of Riverside County, bounded by Calimesa to the north/northwest, Banning to the east, and the San Jacinto wilderness to the south. The Project site is located at the southwest intersection of 4th Street and Veile Avenue within the City of Beaumont, California. It is surrounded by existing developments such as the City's wastewater treatment plant to the west, an auto dismantling facility to the south, a distribution center to the north, and an electrical substation to the east. The Project site is zoned as Manufacturing, and its land use designation is Industrial.

C. PROJECT DESCRIPTION

The Proposed Project would develop a City Yard utilized by multiple departments, including Transit, Fleet Maintenance, Community Services, Public Works, and Wastewater. The approximately 6.15-acre parcel development would include the construction of the following facilities:

- Administration Building (9,982 square feet [sq. ft.])
- Fleet Garage/Storage Building with Welding and Wash Bays (11,250 sq. ft.)
- Solar canopies (10,600 sq. ft.)
- 8 Hydrogen Fueling Stations
- 15 Compressed Natural Gas (CNG) Fueling Stations, and Accessory Structures
- Electric Vehicle (EV) Charging Infrastructure
- Designated parking (uncovered and solar-covered) with up to 200 spaces.

The Project site would accommodate approximately 100 occupants under the current project design, although occupancy levels could vary in the future depending on operational needs and building use. The Project site would operate Monday through Thursday, 8:00 AM to 5:00 PM, and Friday, 8:00 AM to 12:00 PM.

The Administration Building and a 2,980 sq. ft. solar canopy would be developed on the northeastern corner of the Project site. The eastern side of the Project site would consist of 55 parking stalls designated for administration staff, bus drivers, future staff, and fleet garage personnel. This area would incorporate six EV charging stalls and three accessible stalls.

The northwest portion of the Project site would include public and fleet-serving infrastructure, including 15 CNG fueling stations, along with electric, and hydrogen fueling stations and equipment, and a driveway

outlet. The fueling area would include both fast-fill and slow-fill fueling capabilities. Fast-fill CNG and hydrogen stations would primarily serve operational and convenience fueling needs during regular business hours, while slow-fill stations located within the fleet vehicle service area south of the public fueling area would primarily be utilized for overnight bus fueling after business hours. The southwest portion of the Project site would contain the 11,250 sq. ft. Fleet Garage with attached Welding Bay and Wash Bay canopies.

D. CONSTRUCTION AND OPERATION

The Proposed Project construction is expected to begin in early 2027 with a duration of approximately 18 months. Equipment to be used during construction may include the following items:

- Excavators
- Dump Trucks
- Backhoe(s)
- Cement Trucks
- Utility Pick-Up Trucks
- Concrete Finishing Equipment and Tools
- Graders and rollers
- Cranes
- Forklifts

1. Staging Areas

Construction trailers and staging areas will remain on-site during construction. The entire site would be fenced during this time.

2. Best Management Practices (BMPs)

The Proposed Project would implement several BMPs to comply with local, state, and federal regulations. Construction BMPs would be implemented to reduce impacts to air, soil, and water quality. Such BMPs may include water or soil stabilizers, regular maintenance, equipment idling limits, temporary barriers, silt fencing, covering of stockpiles, etc. The Proposed Project would implement a Hydro Plan and Landscaping Plan, which outline design features that would reduce topsoil erosion, stormwater runoff, and water pollution.

For consistency with the MSHCP, the following shall be implemented for the Proposed Project.

1. If nesting season cannot be avoided, standard BMP for nesting season would be implemented, including a preconstruction nesting bird survey to be conducted within the Project area and the selected staging area(s) including a 500-foot buffer, within 7 days prior to the start of construction or staging (including any clearing, grubbing, tree removal, or grading) or according to the survey timing in Project permits. If an active nest is identified, a minimum avoidance buffer around the active nest would be determined and implemented by a qualified biologist to avoid impacts to the active nest. The buffer should be maintained during physical ground-disturbing activities. Once the qualified biologist has determined that nesting has ceased, and the nestlings have fledged and are no longer using the nest, the buffer may be removed.
2. A focused 30-day burrowing owl preconstruction survey would be conducted to ensure protection for this species and compliance with the conservation goals as outlined in the MSHCP and by the

Riverside Conservation Authority (RCA). The surveys will be conducted in compliance with both MSHCP and CDFW guidelines. A report of the findings prepared by a qualified biologist will be submitted to the City of Beaumont for review and approval prior to any permit or ground disturbing activities.

3. Water pollution and erosion control plans shall be developed and implemented in accordance with RWQCB requirements.
4. The footprint of disturbance shall be minimized to the maximum extent feasible. Access to sites shall be via pre-existing access routes to the greatest extent possible.
5. Equipment storage, fueling, and staging areas shall be located on upland sites with minimal risks of direct drainage into riparian areas or other sensitive habitats. These designated areas shall be located in such a manner as to prevent any runoff from entering sensitive habitat. Necessary precautions shall be taken to prevent the release of cement or other toxic substances into surface waters. Project related spills of hazardous materials shall be reported to appropriate entities including but not limited to applicable jurisdictional city, FWS, and CDFG, RWQCB and shall be cleaned up immediately and contaminated soils removed to approved disposal areas.
6. Erodible fill material shall not be deposited into water courses. Brush, loose soils, or other similar debris material shall not be stockpiled within the stream channel or on its banks.
7. To avoid attracting predators of the species of concern, the project site shall be kept as clean of debris as possible. All food related trash items shall be enclosed in sealed containers and regularly removed from the site(s).
8. Construction employees shall strictly limit their activities, vehicles, equipment, and construction materials to the proposed project footprint and designated staging areas and routes of travel. The construction area(s) shall be the minimal area necessary to complete the project and shall be specified in the construction plans. Construction limits will be fenced with orange snow screen. Exclusion fencing should be maintained until the completion of all construction activities. Employees shall be instructed that their activities are restricted to the construction areas.

E. REQUIRED PERMITS AND APPROVALS

Reviewing Agencies include those agencies that do not have discretionary powers but may review the MND for adequacy and accuracy. Responsible Agencies have discretionary approval authority for a project. Potential Reviewing Agencies and Responsible Agencies include the following:

1. Responsible Agencies

State of California Agencies

- Southern California Edison (SCE)
- State Water Resources Control Board (SWRCB)
- California Department of Fish and Wildlife (CDFW)

Permitting Agencies

- South Coast Air Quality Management District (SCAQMD)
- Riverside County Fire Department

- California Division of Occupational Safety and Health (Cal/OSHA)

2. Reviewing Agencies

- Native American Heritage Commission (NAHC), and tribes requesting consultation

3. Permits and Approvals

The following permits may be required prior to construction of the Project. The specific permits and approvals required for the Proposed Project will be determined through the City of Beaumont's plan check and building review processes prior to construction and operation.

- SCAQMD – Rule 403 Dust Control
- SCAQMD – Rule 201 Permit to Construct
- SCAQMD – Rule 203 Permit to Operate
- SCAQMD – Rule 1110.2 Emissions from Gaseous and Liquid Fueled Engines
- SCAQMD – Rule 1113 Architectural Coating
- SCAQMD – Rule 1166 Volatile Organic Compound Emissions from Decontamination of Soil
- SCAQMD – Regulation XIII New Source Review
- SCAQMD – Rule 1401 New Source Review of Toxic Air Contaminants
- SCAQMD – Rule 1466 Control of Particulate Emissions from Soils with Toxic Air Contaminants
- SCAQMD – Rule 1470 Requirements for Stationary Diesel-Fueled Internal Combustion and Other Compression Ignition Engines
- Riverside County Fire Department – Plan Review & Permit
- CalOSHA – Pressure Vessel Permit
- Building Permit
- Encroachment Permit
- Grading Permit

SECTION 3.0 - FINDINGS

An Initial Study has been prepared to assess the Proposed Project's potential impacts on the environment, and the significance of those impacts and was incorporated in the Draft MND. Based on this Initial Study, it has been determined that the Proposed Project would not have any significant impacts on the environment once all proposed mitigation measures have been implemented. This conclusion is supported by the following findings:

- No potential was found for adverse impacts on Agricultural Resources, Land Use, Mineral Resources, Population and Housing, and Recreation associated with the Proposed Project.
- Potential adverse impacts resulting from the Proposed Project were found to be less than significant in the following areas: Aesthetics, Air Quality, Energy, Geology and Soils (excluding paleontological resources), Greenhouse Gas Emissions, Hazards and Hazardous Materials, Hydrology and Water Quality, Noise, Public Services, Transportation, Utilities and Service Systems and Wildfire.
- Full implementation of the proposed mitigation measures included in this MND would reduce potential project-related adverse impact on Biological Resources, Cultural Resources, Geology and Soils (paleontological resources), and Tribal Cultural Resources to a less than significant level.

SECTION 4.0 - PUBLIC COMMENTS

A. Introduction

The primary objective and purpose of the Initial Study/Mitigated Negative Declaration public review process is to obtain comments on the adequacy of the analysis of environmental impacts, the mitigation measures presented, and other analyses contained in the Initial Study prepared on behalf of the City of Palmdale (City). The California Environmental Quality Act (CEQA) requires that the City decision makers consider the comments received during the public review of the Initial Study/Mitigated Negative Declaration prior to carrying out or approving the project (*CEQA Guidelines* Section 15074[b]). All comments are included in this section so that the decision makers may know the opinions of the commenter.

The Initial Study/ Mitigated Negative Declaration was circulated to the public and public agencies for a 30-day public review from June 15, 2026, through July 14, 2026. No comment letters were received regarding the Initial Study/Mitigated Negative Declaration during the comment period. As such, no revisions to the Initial Study/Mitigated Negative Declaration were required.

B. Response to Comments

CEQA REQUIREMENTS REGARDING COMMENTS AND RESPONSES

CEQA Guidelines Section 15204 (b) outlines parameters for submitting comments and reminds persons and public agencies that the focus of review and comment of negative declarations should be, “on the proposed finding that the project will not have a significant effect on the environment. If persons and public agencies believe that the project may have a significant effect, they should: (1) Identify the specific effect; (2) Explain why they believe the effect would occur, and; (3) Explain why they believe the effect would be significant.”

CEQA Guidelines Section 15204 (c) further advises, “Reviewers should explain the basis for their comments, and should submit data or references offering facts, reasonable assumptions based on facts, or expert opinion supported by facts in support of the comments. Pursuant to Section 15064, an effect shall not be considered significant in the absence of substantial evidence.” Section 15204 (d) also states, “Each responsible agency and trustee agency shall focus its comments on environmental information germane to that agency’s statutory responsibility.” Section 15204 (e) states, “This section shall not be used to restrict the ability of reviewers to comment on the general adequacy of a document or of the lead agency to reject comments not focused as recommended by this section.”

In accordance with Public Resources Code 21092.5 (b) of the CEQA Guidelines, the lead agency shall notify any public agency that comments on a negative declaration of the public hearing or hearings, if any, on the project for which the negative declaration was prepared. If notice to the commenting public agency is provided pursuant to Section 21092, the notice shall satisfy the requirement of this subdivision.

**Draft Initial Study/Mitigated Negative Declaration (IS/MND) for
Beaumont Corporate Yard Project (Proposed Project)
(SCH No.: 2026060853)**

South Coast Air Quality Management District (South Coast AQMD) staff appreciate the opportunity to review the above-mentioned document. The County of Riverside is the California Environmental Quality Act (CEQA) Lead Agency for the Proposed Project. To provide context, South Coast AQMD staff has provided a brief summary of the project information and prepared the following comments which are organized by topic of concern.

Summary of Proposed Project Information in the Draft IS/MND

Based on the Draft IS/MND, the Beaumont Corporate Yard Project (Proposed Project) involves the development of a 6.15-acre city yard designed to centralize and manage various municipal services for the City of Beaumont. The facility will support multiple City departments, including Transit, Fleet Maintenance, Community Services, Public Works, and Wastewater administration. The project features several key components and specialized infrastructure:¹

- **Primary Buildings:** The site will have a total facilities area of 31,000 square feet, including a 9,100-square-foot Administration Building, an 11,900-square-foot Warehouse, and a 9,750-square-foot Fleet Garage.²
- **Sustainable Infrastructure:** A major focus of the project is clean energy, including 10,600-square-feet of solar canopies, eight hydrogen fueling stations, 15 Compressed Natural Gas (CNG) fueling stations, and Electric Vehicle (EV) charging infrastructure.
- **Parking and Access:** The design provides up to 200 designated parking spaces (both uncovered and solar-covered) to accommodate approximately 100 occupants, including administrative staff, bus drivers, and maintenance personnel, plus an approximately 39,000-square-feet of landscaping.

The Proposed Project is located at the southwest intersection of 4th Street and Veile Avenue within the City of Beaumont, California in Riverside County.

¹ Draft IS/MND, Page 1.

² Draft IS/MND Appendix A, Page 1.

Comment 1-1

Based on a review of aerial photographs, South Coast AQMD staff found that the nearest sensitive receptor (e.g., residential development) is located 680 feet to the northeast of the project site. Construction of the Proposed Project is anticipated to occur in early 2027 over a period of 18 months.³

South Coast AQMD Comments

South Coast AQMD Air Permits and Role as a Responsible Agency

Comment 1-2

If implementation of the Proposed Project would require the use of new stationary and portable sources, including but not limited to emergency generators, fire water pumps, boilers, etc., air permits from South Coast AQMD will be required. The final CEQA document should include a discussion about the potentially applicable rules that the Proposed Project needs to comply with. Those rules may include, for example, Rule 201 – Permit to Construct,⁴ Rule 203 – Permit to Operate,⁵ Rule 401 – Visible Emissions,⁶ Rule 402 – Nuisance,⁷ Rule 403 – Fugitive Dust,⁸ Rule 1110.2 – Emissions from Gaseous and Liquid Fueled Engines,⁹ Rule 1113 – Architectural Coating,¹⁰ Rule 1166 – Volatile Organic Compound Emissions from Decontamination of Soil,¹¹ Regulation XIII – New Source Review,¹² Rule 1401 – New Source Review of Toxic Air Contaminants,¹³ Rule 1466 – Control of Particulate Emissions from Soils with Toxic Air Contaminants,¹⁴ Rule 1470 – Requirements for Stationary Diesel-Fueled Internal Combustion and Other Compression Ignition Engines,¹⁵ etc. It is important to note that when air permits from South Coast AQMD are required, the role of South Coast AQMD changes from a Commenting Agency to a Responsible Agency under CEQA. In addition, if South Coast AQMD is identified as a Responsible Agency, per CEQA Guidelines Sections 15086, the Lead Agency is required to consult with South Coast AQMD.

CEQA Guidelines Section 15096 sets forth specific procedures for a Responsible Agency, including making a decision on the adequacy of the CEQA document for use as part of the process for conducting a review of the Proposed Project and issuing discretionary approvals. For these reasons, the final CEQA document should be revised to include a discussion about any and all new stationary and portable equipment requiring South Coast AQMD air permits, provide the evaluation of their air quality and greenhouse gas impacts, and identify South Coast AQMD as a Responsible Agency for the Proposed Project as this information will be relied upon as the basis for the permit conditions and emission limits for the air permit(s). Please contact South Coast AQMD's Engineering and Permitting staff at (909) 396-3385 for questions regarding what types

of equipment would require air permits. For more general information on permits, please visit South Coast AQMD's webpage at <https://www.aqmd.gov/home/permits>.

Comment 1-3

Inconsistent Project Description Between Draft IS/MND and Appendix A – Air Quality Assessment

The project description presented in Draft IS/MND is inconsistent with the project description contained in Appendix A – Air Quality Assessment, dated February 2025. Specifically, Draft IS/MND describes the Proposed Project to include a 9,982-square-foot Administration Building and an 11,250-square-foot Fleet Garage/Storage Building, together with the proposed fueling infrastructure, solar canopies, EV charging infrastructure, and parking facilities. However, Appendix A Section 1.3 describes the Proposed Project as including a 9,100-square-foot Administration Building, an 11,900-square-foot Warehouse, and a 9,750-square-foot Fleet Garage. The differences in the reported building sizes suggest that the project design might have changed since the air quality analysis was prepared in February 2025.

Because the environmental analysis relies on an accurate project description, such inconsistencies could create uncertainty regarding the scope of the Proposed Project that was evaluated. While the warehouse structure size as proposed would not trigger applicability of South Coast AQMD Rule 2305, South Coast AQMD staff recommends that the Lead Agency clarify the current project description to demonstrate that Appendix A adequately analyzes the project as currently proposed. If the Proposed Project would include a warehouse, South Coast AQMD staff recommendation is that the Lead Agency update or supplement the technical analysis, as appropriate, to ensure that the environmental document evaluates the actual project under consideration.

Project description land use sub-type is inconsistent with the CalEEMod User Guide

In accordance with the project description outlined in the Draft IS/MND, the construction of 31,000 square feet of primary buildings plus sustainable infrastructure (as stated above) is proposed on 6.15 acres of land. However, in the Draft IS/MND Appendix A – Air Quality Assessment Attachment A Section 1.2 – Land Use Types, the Proposed Project assumes *Land Use Sub-type* as “Government (Civic Center)” for all the Primary Buildings to equal 31,000 square feet in area. Also, the air quality analysis does not identify a CalEEMod land use sub-type for the portion of the site designated for “Sustainable Infrastructure”.

Comment 1-4

According to the CalEEMod User Guide – Version 2022.1, it explicitly states the characteristics of Government (Civic Center) Subtype: “A group of government buildings that are interconnected by pedestrian walkways”.¹⁶ Based on the Project Description, it is unclear whether classifying all 31,000 square feet of the proposed development under this land use sub-type is appropriate. Furthermore, the omission of land use sub-types for the sustainable infrastructure raises additional questions regarding whether the operational characteristics of the Proposed Project have been accurately represented in the emissions modeling.

Because CalEEMod uses land use sub-types to estimate operational characteristics, including trip generation, vehicle fleet mix, area source emissions, and energy demand, selecting an inappropriate land use category may result in inaccurate emissions estimates. Therefore, South

¹⁶ [CalEEMod User Guide - Version 2022.1](#)

↑ Coast AQMD staff recommends that the Lead Agency review and revise the CalEEMod land use assumptions to ensure they are consistent with the Proposed Project's actual uses and with the CalEEMod User Guide. If the Proposed Project includes facilities such as warehouses, fleet maintenance garages, or other operational infrastructure, the Lead Agency should evaluate whether additional or alternative CalEEMod land use sub-types should be incorporated into the analysis and revise the air quality impact analysis accordingly.

Inconsistency in the Proposed Project's Construction Schedule

Comment 1-5

As mentioned in the Draft IS/MND Section 1.4 – Construction and Operation, the Proposed Project is expected to start in early 2027.¹⁷ However, in the Appendix A – Air Quality Assessment Section 1.3 – Project Description, it is stated that the Proposed Project would start in late 2025.¹⁸ The construction and operation schedule information discussed in the Draft IS/MND should be consistent. Therefore, the correction should be included in the Final MND.

Potential Underestimation of Emissions Due to Imprecise Assumptions for Trip Rates in Emissions Analysis

Comment 1-6

According to the Draft IS/MND, a level of service (LOS) traffic analysis shall not be required based on the City of Beaumont Traffic Impact Analysis Guidelines since the Proposed Project is expected to generate less than 100 trips per each peak hour. However, Appendix E – Trip Generation of the Draft IS/MND explains that the number of peak hour trips is calculated based on the assumption that shifts start as early as 4:30 AM and end as late as 8:30 PM, while per Draft IS/MND the Proposed Project site would operate Monday through Thursday, 8:00 AM to 5:00 PM, and Friday, 8:00 AM to 12:00 PM. For this reason, the Lead Agency is recommended to revise the calculations in the Final MND to ensure a more accurate assessment of emissions, accounting for the unique circumstances and logistical realities of the Proposed Project.

Potentially Inappropriate Vehicle Fleet Mix to Evaluate Proposed Project's Air Quality Impacts from Mobile Sources

Comment 1-7

The Proposed Project's operational emissions from mobile sources may have been underestimated due to the use of inappropriate vehicle fleet mixes in the Draft IS/MND. Appendix A Section 1.3 describes the Proposed Project to include an 11,900-square-foot Warehouse. Operation of a warehouse is expected to attract trucks activity associated with goods movement.

Based on a review of the CalEEMod technical files provided to South Coast AQMD staff via e-mail (Vincent Lopez, personal communication, July 9th, 2026), the CalEEMod input modeling files used a daily trip generation rate of 1,053 per weekday; however, neither the Draft IS/MND nor Appendix A include any discussion regarding the vehicle fleet mix. Thus, South Coast AQMD staff recommend that the Lead Agency re-evaluate the Proposed Project's air quality impacts to account for the appropriate vehicle fleet mix supported by substantial evidence.

¹⁷ Draft IS/MND, Page 2.

¹⁸ Draft IS/MND Appendix A, Page 1.

Inconsistent Trip Generation Rates in Draft IS/MND Traffic Analysis and CalEEMod

Table 2 of Appendix E of the Draft IS/MND shows the following project trip generation rates:

Table 2. Project Trip Generation (Based on Employees)

		Units	Daily	AM Peak Hour			PM Peak Hour		
Land Use				In	Out	Total	In	Out	Total
<u>Trip Rates</u>									
Government Office Building (LU 730)		Employees	7.45	0.83	0.28	1.10	0.14	0.57	0.71
General Light Industrial (LU 110)		Employees	4.02	0.43	0.09	0.52	0.15	0.40	0.55
<u>Project Trip Generation</u>									
Administration Building (General Office)	75	Employees	559	62	21	83	11	42	53
Fleet Garage/Storage Building	25	Employees	101	11	2	13	4	10	14
Total Trips			660	73	23	96	15	52	67

Based on a review of the CalEEMod technical files provided to South Coast AQMD staff via e-mail (Vincent Lopez, personal communication, July 9th, 2026), it appears that the trip generation rates shown in Table 2 and the trip generation rates in the CalEEMod input modeling files for the operational phase do not match. For instance, Total Trips in Table 2 shows a daily trip generation rate of 660 based on employees, while the CalEEMod input modeling files show a daily trip generation rate of 1,053 per weekday. Staff therefore recommend the Lead Agency to: 1) review and revise the Proposed Project's Operational Trip Generation Rates; 2) re-calculate the emissions; and 3) include the results in the Final MND.

Conclusion

The Lead Agency is recommended to revise the CEQA analysis to address the aforementioned comments and provide the necessary evidence to sufficiently support the conclusions reached. If the requested information and analysis are not included in the final CEQA document, either the Final MND or other type of CEQA document, the Lead Agency should provide reasons for not doing so. Pursuant to California Public Resources Code Section 21092.5(b) and CEQA Guidelines Section 15074, prior to approving the Proposed Project, the Lead Agency shall consider the MND for adoption together with any comments received during the public review process and notify each public agency when any public hearings are scheduled. Please provide South Coast AQMD with written responses to all comments contained herein prior to the adoption of the Final MND. When responding to issues raised in the comments, detailed reasons supported by substantial evidence in the record explaining why specific comments and suggestions are not accepted must be provided. In addition, if the Lead Agency decides to adopt the Final MND, please provide South Coast AQMD with a notice of any scheduled public hearing(s).

Thank you for the opportunity to provide comments. South Coast AQMD staff are available to work with the Lead Agency to address any air quality questions that may arise from this comment

Response to Comment #1

SCAQMD comments a summary of the Proposed Project, including project components, location, construction schedule, and the distance to the nearest sensitive receptor. The comment does not raise any specific concerns regarding the adequacy of the Draft IS/MND's analysis or identify any new environmental impacts. Therefore, no revisions to the Draft IS/MND are required in response to this comment.

Response to Comment #2

SCAQMD comments that the Proposed Project may require air permits for certain stationary and portable equipment and recommends that the Final CEQA document include additional discussion regarding applicable permitting requirements, potentially applicable SCAQMD rules, and the role of SCAQMD as a Responsible Agency, as applicable.

The Final MND will be revised to clarify that implementation of the Proposed Project may require permits and approvals from SCAQMD and other applicable permitting agencies. Such permits and approvals may include SCAQMD permits for applicable stationary or portable equipment; Riverside County Fire Department permit; CalOSHA pressure vessel permit; permits or approvals associated with the proposed fueling infrastructure; and applicable CUPA, utility, and encroachment permits or approvals. The specific permits and approvals required for the Proposed Project will be determined through the City of Beaumont's plan check and building review processes prior to construction and operation. The Project would be required to comply with all applicable SCAQMD Rules and regulations. The Final MND will be revised to include the previously mentioned permits and applicable SCAQMD Rules.

As stated in Section 1.5.1 of the Draft IS/MND, SCAQMD was identified as a Responsible Agency for the Proposed Project. Additionally, the Final MND will be revised to include SCAQMD as a Permitting Agency.

Revisions are identified in Section 5.0 of this document.

Response to Comment #3

SCAQMD comments that the Project Description presented in the Draft IS/MND differs from the project description evaluated in the February 2025 Air Quality Report and requests clarification regarding whether the Air Quality Report adequately evaluates the Proposed Project as currently proposed.

The Project Description presented in the Air Quality Report was based on an earlier iteration of the Proposed Project that included a 9,100-square-foot Administration Building, an 11,900-square-foot Warehouse, and a 9,750-square-foot Fleet Garage. Following preparation of the Air Quality Report, the Proposed Project underwent additional design iterations. As currently proposed and described in the Draft IS/MND, the Project would include a 9,982-square-foot Administration Building and an 11,250-square-foot Fleet Garage, as well as the associated fueling infrastructure, solar canopies, EV charging infrastructure, and parking facilities. The warehouse component evaluated in the Air Quality Assessment is no longer part of the Proposed Project.

The differences in the project descriptions are therefore the result of changes to the Project that occurred after preparation of the Air Quality Report. The Air Quality Report evaluated an earlier iteration of the Project that included an additional 11,900-square-foot Warehouse use that is not included in the current Proposed Project. The Warehouse use could have resulted in additional operational activity, including truck trips, beyond that anticipated under the current Proposed Project. Accordingly, the Air Quality Assessment evaluated a Project with a greater overall intensity of use and potential operational activity than the Project currently proposed.

Revisions have been included to clarify the current Project description and to explain that the Air Quality Report was prepared based on an earlier iteration of the Project. Based on the changes to the Project described above, the Air Quality Report provides a conservative evaluation of the current Proposed Project's potential air quality impacts, and the conclusions of the Air Quality Report remain applicable. Therefore, no revisions to the technical air quality analysis are necessary in response to this comment.

The revisions are clarifying in nature and do not alter the conclusions in the Air Quality Report regarding the significance of Project impacts. No further action is required.

Revisions are identified in Section 5.0 of this document.

Response to Comment #4

SCAQMD comments that the CalEEMod land use assumptions used in the Air Quality Report may not accurately represent the Proposed Project, including the classification of the Project's primary buildings as "Government (Civic Center)."

The Proposed Project consists primarily of a government office and fleet maintenance facilities that would support the operations of the City, with associated fueling infrastructure, solar canopies, and electric vehicle charging infrastructure. Given the primary function and intended use of the site is for government with a small portion as a City fleet fueling center, the "Civic Center" land use category was determined to be the most appropriate available CalEEMod land use category to represent the Project's operational characteristics. Therefore, the conclusions of the Air Quality Report would remain applicable, and no revisions to the Draft IS/MND are required in response to this comment.

Response to Comment #5

SCAQMD comments that there is an inconsistency between the construction schedule presented in the Draft IS/MND and the Air Quality Report.

The construction schedule presented in the Air Quality Report was based on an earlier anticipated construction start date. Following preparation of the Air Quality Report, the Project underwent additional iterations, which resulted in the anticipated construction start date being delayed to early 2027, as reflected in the Draft IS/MND. However, the anticipated duration and phases of construction remain consistent with the assumptions used in the Air Quality Report. Therefore, the construction emissions modeled in the Air Quality Report remain representative of the Project's potential construction-related air quality impacts.

Additionally, modeling an earlier construction start date provides a conservative analysis because emissions standards for construction equipment are expected to become more stringent over time. The construction schedule will be clarified in the Final MND to ensure consistency throughout the environmental document, and the Project will conform to the SCAQMD guidelines at the time of construction. The conclusions of the Air Quality Report regarding the Project's potential air quality impacts would remain unchanged.

Response to Comment #6

SCAQMD comments that there may be an inconsistency between the operating hours described in the Draft IS/MND and the assumptions used in the Project's trip generation analysis. As noted by SCAQMD, the peak hour trip calculations reflect employee shifts that may begin earlier and end later than the operating hours currently described in the Draft IS/MND.

The Draft IS/MND will be revised to accurately describe the Project's anticipated operating hours. Given the nature of the Proposed Project and its use as a City facility supporting multiple City departments and operations, operating hours may fluctuate depending on the specific facility and operational needs. The trip generation and air quality analyses were based on the operational characteristics of the Proposed Project, including anticipated employee activity and associated vehicle trips. The correction to the operating hours description in the Draft IS/MND does not change the conclusions of the technical studies or the significance determinations presented in the Draft IS/MND. Therefore, the Draft IS/MND will be revised to clarify the anticipated operating hours, but no changes to the technical analyses or impact conclusions are necessary in response to this comment.

Response to Comment #7

SCAQMD comments that the Air Quality Report includes a warehouse component that could generate truck activity but does not discuss the vehicle fleet mix assumptions used in the CalEEMod analysis. SCAQMD recommends that the operational air quality analysis be reevaluated using an appropriate vehicle fleet mix supported by substantial evidence.

The Air Quality Report was prepared based on an earlier iteration of the Proposed Project that included the warehouse component. Following preparation of the Air Quality Report, the Project underwent additional iterations, and the Lead Agency ultimately removed the warehouse component from the Proposed Project. Accordingly, the warehouse component is not included in the Project as analyzed in the Draft IS/MND. The Air Quality Report therefore evaluated a project with a greater intensity of development and potential truck activity than the current Proposed Project.

Because the warehouse component has been removed from the Proposed Project, the current Project would not generate the truck activity associated with that use. As such, the operational mobile-source emissions analyzed in the Air Quality Report represent a conservative analysis of the Proposed Project's potential operational air quality impacts. The removal of the warehouse component would not result in an increase in the Project's potential operational air quality impacts, and the conclusions of the Air Quality Report remain applicable. Therefore, no revisions to the Draft IS/MND are required in response to this comment.

Response to Comment #8

SCAQMD comments that there is a discrepancy between the operational trip generation assumptions presented in the Draft IS/MND and those used in the Air Quality Report.

The 660 daily trips identified in the Draft IS/MND reflect the current Project characteristics and anticipated employee activity. The CalEEMod analysis, however, was prepared based on an earlier iteration of the Proposed Project and assumed 1,053 daily trips.

Following preparation of the Air Quality Report, the Project underwent additional iterations, and certain uses that contributed to the higher trip generation estimate were determined to no longer be required. Therefore, the trip generation assumptions used in the Air Quality Report represent a more intense version of the Proposed Project than what is currently proposed. The higher trip count used in the CalEEMod analysis provides a conservative estimate of the Project's potential operational mobile-source emissions. As the modeled emissions were based on a higher level of trip generation than would occur under the current Project, the Air Quality Report's conclusions regarding the significance of the Project's operational air quality impacts remain applicable. Therefore, no revisions to the Draft IS/MND are required in response to this comment.

Response to Comment #9

SCAQMD provides a summary of the aforementioned requests. The comment does not raise any specific concerns regarding the adequacy of the Draft IS/MND's analysis or identify any new environmental impacts. Therefore, no revisions to the Draft IS/MND are required in response to this comment.

SECTION 5.0 – REVISIONS TO THE DRAFT MITIGATED NEGATIVE DECLARATION

This errata section identifies changes made to the Draft MND to correct or clarify the information contained in the document, and therefore, these changes do not require recirculation. Changes made to the Draft MND are identified here in strikeout text to indicate deletions and bold italics to signify additions.

Section 1.5.1 of the IS/MND – Responsible Agencies

~~Regional~~ **Permitting Agencies**

- South Coast Air Quality Management District (SCAQMD)
- ***Riverside County Fire Department***
- ***California Division of Occupational Safety and Health (Cal/OSHA)***

Section 1.5.3 of the IS/MND – Permits and Approvals

The following permits may be required prior to construction of the Project. ***The specific permits and approvals required for the Proposed Project will be determined through the City of Beaumont's plan check and building review processes prior to construction and operation.***

- SCAQMD – Rule 403 Dust Control
- ***SCAQMD – Rule 201 Permit to Construct***
- ***SCAQMD – Rule 203 Permit to Operate***
- ***SCAQMD – Rule 1110.2 Emissions from Gaseous and Liquid Fueled Engines***
- ***SCAQMD – Rule 1113 Architectural Coating***
- ***SCAQMD – Rule 1166 Volatile Organic Compound Emissions from Decontamination of Soil***
- ***SCAQMD – Regulation XIII New Source Review***
- ***SCAQMD – Rule 1401 New Source Review of Toxic Air Contaminants***
- ***SCAQMD – Rule 1466 Control of Particulate Emissions from Soils with Toxic Air Contaminants***
- ***SCAQMD – Rule 1470 Requirements for Stationary Diesel-Fueled Internal Combustion and Other Compression Ignition Engines***
- ***Riverside County Fire Department – Plan Review & Permit***
- ***CalOSHA – Pressure Vessel Permit***
- Building Permit
- Encroachment Permit
- Grading Permit

Section 4.3.1 of the IS/MND – Air Quality Environmental Setting

An Air Quality Assessment was prepared for the Proposed Project by Ldn Consulting in February 2025 (Appendix A). ***After preparation of the Air Quality Assessment, the Project underwent design revisions. The current Proposed Project, as described in this IS/MND, includes a 9,982-square-foot Administration Building and an 11,250-square-foot Fleet Garage/Storage Building, as well as associated fueling infrastructure, solar canopies, electric vehicle charging infrastructure, and parking facilities. The earlier project configuration evaluated in the Air Quality Assessment included a 9,100-square-foot Administration Building, an 11,900-square-foot Warehouse, and a 9,750-square-foot Fleet Garage. The Warehouse component is not included in the current Proposed Project. Although the project description evaluated in the Air Quality Assessment differs from the current Proposed Project, the Air Quality***

Assessment evaluated a greater overall building area and included the additional Warehouse use. Therefore, the Air Quality Assessment provides a conservative evaluation of the current Proposed Project's potential air quality impacts.

The Project site is located in the City in the western portion of Riverside County, which is part of the South Coast Air Basin (SCAB) that includes all of Orange County as well as the non-desert portions of Los Angeles, Riverside, and San Bernardino counties. The SCAB is located on a coastal plain with connecting broad valleys and low hills to the east. Regionally, the SCAB is bounded by the Pacific Ocean to the southwest and high mountains to the east forming the inland perimeter. The Project site is located toward the northeast portion of the SCAB near the foot of the San Bernardino Mountains, which define the eastern boundary of the SCAB.

SECTION 6.0 - MITIGATED NEGATIVE DECLARATION

This document, along with the Draft Initial Study/Mitigated Negative Declaration; Mitigation Monitoring and Reporting Program; and the Notice of Determination, constitute the Final Mitigated Negative Declaration for the Beaumont Corporate Yard Project in the City of Beaumont.

Pursuant to Section 21082.1 of the California Environmental Quality Act, the City of Beaumont has independently reviewed and analyzed the Initial Study and Mitigated Negative Declaration for the Proposed Project and finds that these documents reflect the independent judgment of the City. The City, as lead agency, also confirms that the project mitigation measures detailed in these documents are feasible and will be implemented as stated in the MND and MMRP.

June 2026

MITIGATION MONITORING AND REPORTING PROGRAM

Public Resources Code, Section 21081.6 (Assembly Bill 3180) requires that mitigation measures identified in environmental review documents prepared in accordance with California Environmental Quality Act (CEQA) are implemented after a project is approved. Therefore, this Mitigation Monitoring and Reporting Program (MMRP) has been prepared to ensure compliance with the adopted mitigation measures during the demolition and construction phases of Sunset Reservoir Project.

The City of Beaumont is the agency responsible for implementation of the mitigation measures identified in the MND. This MMRP provides the City of Redlands with a convenient mechanism for quickly reviewing all the mitigation measures including the ability to focus on select information such as timing. The MMRP includes the following information for each mitigation measure:

- The phase of the project during which the required mitigation measure must be implemented;
- The phase of the project during which the required mitigation measure must be monitored; and
- The enforcement agency.

The MMRP includes a checklist to be used during the mitigation monitoring period. The checklist will verify the name of the monitor, the date of the monitoring activity, and any related remarks for each mitigation measure.

1.1 PROJECT BEST MANAGEMENT PRACTICES (BMPs)

This plan shall document the contractor's approach to complying with all applicable contract requirements, including the implementation of best management practices (BMPs) in accordance with instructions listed in the construction specifications, and compliance with regulatory requirements. The City shall oversee monitoring compliance through systematic verification and reporting and shall ensure that any deficiencies are promptly corrected. The following BMPs shall be implemented during construction to minimize potential environmental impacts and maintain compliance with applicable regulations:

BMP-1 If nesting season cannot be avoided, standard BMP for nesting season would be implemented, including a preconstruction nesting bird survey to be conducted within the Project area and the selected staging area(s) including a 500-foot buffer, within 7 days prior to the start of construction or staging (including any clearing, grubbing, tree removal, or grading) or according to the survey timing in Project permits. If an active nest is identified, a minimum avoidance buffer around the active nest would be determined and implemented by a qualified biologist to avoid impacts to the active nest. The buffer should be maintained during physical ground-disturbing activities. Once the qualified biologist has determined that nesting has ceased, and the nestlings have fledged and are no longer using the nest, the buffer may be removed.

BMP-2 A focused 30-day burrowing owl preconstruction survey would be conducted to ensure protection for this species and compliance with the conservation goals as outlined in the MSHCP and by the Riverside Conservation Authority (RCA). The surveys will be conducted in compliance with both MSHCP and CDFW guidelines. A report of the findings prepared by a qualified biologist will be submitted to the City of Beaumont for review and approval prior to any permit or ground disturbing activities.

- BMP-3** Water pollution and erosion control plans shall be developed and implemented in accordance with RWQCB requirements.
- BMP-4** The footprint of disturbance shall be minimized to the maximum extent feasible. Access to sites shall be via pre-existing access routes to the greatest extent possible.
- BMP-5** Equipment storage, fueling, and staging areas shall be located on upland sites with minimal risks of direct drainage into riparian areas or other sensitive habitats. These designated areas shall be located in such a manner as to prevent any runoff from entering sensitive habitat. Necessary precautions shall be taken to prevent the release of cement or other toxic substances into surface waters. Project related spills of hazardous materials shall be reported to appropriate entities including but not limited to applicable jurisdictional city, FWS, and CDFG, RWQCB and shall be cleaned up immediately and contaminated soils removed to approved disposal areas.
- BMP-6** Erodible fill material shall not be deposited into water courses. Brush, loose soils, or other similar debris material shall not be stockpiled within the stream channel or on its banks.
- BMP-7** To avoid attracting predators of the species of concern, the project site shall be kept as clean of debris as possible. All food related trash items shall be enclosed in sealed containers and regularly removed from the site(s).
- BMP-8** Construction employees shall strictly limit their activities, vehicles, equipment, and construction materials to the proposed project footprint and designated staging areas and routes of travel. The construction area(s) shall be the minimal area necessary to complete the project and shall be specified in the construction plans. Construction limits will be fenced with orange snow screen. Exclusion fencing should be maintained until the completion of all construction activities. Employees shall be instructed that their activities are restricted to the construction areas.

MITIGATION MONITORING AND REPORTING PROGRAM Cherry Channel Drainage Project							
Mitigation Measure	Implementation Phase	Monitoring Phase	Enforcement Agency	Level of Significance After Mitigation Less than Significant (LTS)	Verification of Compliance		
					Initial	Date	Remarks
Biological Resources							
MM BIO-1: Construction of the Proposed Project shall avoid tree removal during nesting bird season, which is typically from February 1 st to August 31 st , to the greatest extent feasible. If nesting season cannot be avoided, a preconstruction nesting bird survey shall be conducted within the Project area and the selected staging area(s) including a 500-foot buffer, within 7 days prior to the start of construction or staging (including any clearing, grubbing, tree removal, or grading) or according to the survey timing in Project permits. If an active nest is identified, a minimum avoidance buffer around the active nest shall be determined and implemented by a qualified biologist to avoid impacts to the active nest. The buffer shall be maintained during physical ground-disturbing activities. Once the qualified biologist has been determined that nesting has ceased, and the nestlings have fledged and are no longer using the nest, the buffer may be removed.	Pre-Construction	Construction	City of Beaumont	LTS			
Cultural Resources							
CUL-1: The Applicant shall retain the services of a Qualified Archaeologist, meeting the Secretary of the Interior Standards, for the duration of ground-disturbing construction activity. All construction-related ground disturbing activity that includes cutting into native intact soils shall be monitored by a cultural resources specialist proficient in construction monitoring setting. The Qualified Archaeologist or cultural resources specialist working under the direction of the Qualified Archaeologist shall provide training to inform all construction personnel prior to construction activities about the proper procedures in the event of an archaeological discovery. The training shall be held in conjunction with the Project’s initial on-site safety meeting and shall explain the importance and legal basis for the protection of significant archaeological resources. In the event of an inadvertent discovery of potential archaeological resources (artifacts or features) during ground-disturbing activities, construction activities within a 50-foot radius of the discovery shall be halted while the Qualified Archaeologist assesses the find. If the resource is determined to be significant or unique through significance evaluation, and site avoidance is not possible, appropriate site-specific mitigation measures shall be established and undertaken. These might include an archaeological mitigation and monitoring plan, treatment, or data recovery programs. All monitoring or associated plans would be prepared and implemented under the direction of a qualified archaeologist. All required close-out reporting would be completed in accordance with the Office of Historic Preservation’s Archaeological Resource Management Reports (ARMR).	Pre-Construction	Construction	City of Beaumont	LTS			

Mitigation Measure	Implementation Phase	Monitoring Phase	Enforcement Agency	Level of Significance After Mitigation	Verification of Compliance		
					Initial	Date	Remarks
Geology and Soils							
PAL-1: Prior to issuance of a grading permit, the City shall be required to obtain the services of a Qualified Project Paleontologist to remain on call for the duration of the proposed ground disturbing construction activity. The paleontologist selected must be approved by the City. Upon approval or request by the City, a paleontological mitigation plan (PMP) outlining procedures for paleontological data recovery shall be prepared for the Project and submitted to the City for review and approval. The development and implementation of the PMP shall include consultations with the District’s Engineering Geologist as well as a requirement that the curation of all specimens recovered under any scenario shall be through an appropriate repository agreed upon by the City. If the District accepts ownership, the curation location may be revised. The PMP shall include developing a multilevel ranking system, or Potential Fossil Yield Classification (PFYC), as a tool to demonstrate the potential yield of fossils within a given stratigraphic unit. The PMP shall outline the monitoring and salvage protocols to address paleontological resources encountered during Project-related ground-disturbing activities, as well as the appropriate recording, collection, and processing protocols to appropriately address any resources discovered.	Pre-Construction/Construction	Construction	City of Beaumont	LTS			
Tribal Cultural Resources							
TCR-1: Prior to the issuance of grading permits, the applicant shall enter into a Tribal Monitoring Services Agreement with the Morongo Band of Mission Indians (MBMI) for the Project. The Tribal Monitor shall be on-site during all ground-disturbing activities (including, but not limited to, clearing, grubbing, tree and bush removal, grading, trenching, fence post placement and removal, construction excavation, excavation for all utility and irrigation lines, and landscaping phases of any kind). The Tribal Monitor shall have the authority to temporarily divert, redirect, or halt the ground-disturbing activities to allow identification, evaluation, and potential recovery of cultural resources.	Pre-Construction/Construction	Construction	City of Beaumont	LTS			
TCR-2: Prior to any ground-disturbing activities (including, but not limited to, clearing, grubbing, tree and bush removal, grading, trenching, fence post replacement and removal, construction excavation, excavation for all utility and irrigation lines, and landscaping phases of any kind), and prior to the issuance of grading permits, the Applicant shall retain a Qualified Archaeologist who meets the U.S. Secretary of the Interior Standards (SOI). The Archaeologist shall be present during all ground disturbing activities to identify any known or suspected archaeological and/or cultural resources. The Archaeologist will conduct a Cultural Resource Sensitivity Training, in conjunction with the Tribe Tribal Historic Preservation Officer (THPO), and/or designated Tribal Representative. The training session will focus on the archaeological and	Pre-Construction/Construction	Construction	City of Beaumont	LTS			

Mitigation Measure	Implementation Phase	Monitoring Phase	Enforcement Agency	Level of Significance After Mitigation	Verification of Compliance		
					Initial	Date	Remarks
tribal cultural resources that may be encountered during ground-disturbing activities as well as the procedures to be followed in such an event.							
TCR-3: Prior to any ground-disturbing activities the project Archaeologist shall develop a Cultural Resource Management Plan (CRMP) and/or Archaeological Monitoring and Treatment Plan (AMTP) to address the details, timing, and responsibilities of all archaeological and cultural resource activities that occur on the project site. This Plan shall be written in consultation with the consulting Tribe and shall include the following: approved Mitigation Measures (MM)/Conditions of Approval (COA), contact information for all pertinent parties, parties' responsibilities, procedures for each MM or COA, and an overview of the project schedule.	Pre-Construction	Construction	City of Beaumont	LTS			
TCR-4: The retained Qualified archeologist and Consulting Tribe representative shall attend the pre-grade meeting with the grading contractors to explain and coordinate the requirements of the monitoring plan.	Pre-Construction	Pre-Construction	City of Beaumont	LTS			
TCR-5: During all ground-disturbing activities the Qualified Archaeologist and the Tribal Monitor shall be onsite full-time. The frequency of inspections shall depend on the rate of excavation, the materials excavated, and any discoveries of Tribal Cultural Resources as defined in California Public Resources Code Section 21074. Archaeological and Tribal Monitoring will be discontinued when the depth of grading and the soil conditions no longer retain the potential to contain cultural deposits. The Qualified Archaeologist, in consultation with the Tribal Monitor, shall be responsible for determining the duration and frequency of monitoring.	Construction	Construction	City of Beaumont	LTS			
TCR-6: In the event that previously unidentified cultural resources are unearthed during construction, the Qualified Archaeologist and the Tribal Monitor shall have the authority to temporarily divert and/or temporarily halt ground-disturbance operations in the area of discovery to allow for the evaluation of potentially significant cultural resources. Isolates and clearly non-significant deposits shall be minimally documented in the field and collected so the monitored grading can proceed. If a potentially significant cultural resource(s) is discovered, work shall stop within a 60-foot perimeter of the discovery and an Environmentally Sensitive Area (ESA) physical demarcation/barrier constructed. All work shall be diverted away from the vicinity of the find, so that the find can be evaluated by the Qualified Archaeologist and Tribal Monitor[s]. The Archaeologist shall notify the City and consulting Tribe[s] of said discovery. The Qualified Archaeologist, in consultation with the Lead Agency, the consulting Tribe[s], and the Tribal Monitor, shall determine the significance of the discovered resource. A recommendation for the treatment and disposition of the Tribal Cultural Resource shall be made	Construction	Construction	City of Beaumont	LTS			

Mitigation Measure	Implementation Phase	Monitoring Phase	Enforcement Agency	Level of Significance After Mitigation	Verification of Compliance		
					Initial	Date	Remarks
by the Qualified Archaeologist in consultation with the Tribe[s] and the Tribal Monitor[s] and be submitted to the Lead Agency for review and approval. Below are the possible treatments and dispositions of significant cultural resources in order of CEQA preference: A. Full avoidance. B. If avoidance is not feasible, Preservation in place. C. If Preservation in place is not feasible, all items shall be reburied in an area away from any future impacts and reside in a permanent conservation easement or Deed Restriction. D. If all other options are proven to be infeasible, data recovery through excavation and then curation in a Curation Facility that meets the Federal Curation Standards (CFR 79.1)							
TCR-7: The following specific conditions to be imposed in order to protect Native American human remains and/or cremations. No photographs are to be taken except by the coroner, with written approval by the consulting Tribe. A. Should human remains and/or cremations be encountered on the surface or during any and all ground-disturbing activities (i.e., clearing, grubbing, tree and bush removal, grading, trenching, fence post placement and removal, construction excavation, excavation for all water supply, electrical, and irrigation lines, and landscaping phases of any kind), work in the immediate vicinity of the discovery shall immediately stop within a 100-foot perimeter of the discovery. The area shall be protected; project personnel/observers will be restricted. The County Coroner is to be contacted within 24 hours of discovery. The County Coroner has 48 hours to make his/her determination pursuant to State and Safety Code §7050.5. and Public Resources Code (PRC) § 5097.98. B. In the event that the human remains and/or cremations are identified as Native American, the Coroner shall notify the Native American Heritage Commission within 24 hours of determination pursuant to subdivision (c) of HSC §7050.5. C. The Native American Heritage Commission shall immediately notify the person or persons it believes to be the Most Likely Descendant (MLD). The MLD has 48 hours, upon being granted access to the Project site, to inspect the site of discovery and make his/her recommendation for final treatment and disposition, with appropriate dignity, of the remains and all associated grave goods pursuant to PRC §5097.98 D. If the Morongo Band of Mission Indians has been named the MLD, the Tribe may wish to rebury the human remains and/or cremation and sacred items in their place of discovery with no further disturbance where they will reside in perpetuity. The place(s) of reburial will not be disclosed by any party and is exempt from the California Public Records Act	Construction	Construction	City of Beaumont	LTS			

Mitigation Measure	Implementation Phase	Monitoring Phase	Enforcement Agency	Level of Significance After Mitigation	Verification of Compliance		
					Initial	Date	Remarks
(California Government Code § 6254[r]). Reburial location of human remains and/or cremations will be determined by the Tribe’s MLD, the landowner, and the City Planning Department.
